ONE_SHEET — Wheel-rooted Continuity + FSC Engine

A) Canonical Root: Psychological-Tier Wheel (R1–R7)

Clockwise maturation; LCD dendrite rollover at boundaries; counter-clockwise regression/simulation. Treat as the root graph for all expansions.

B) Engines: Bidirectional Collapse Protocol + Failure-Surface Cartography (FSC)

Collapse Protocol: anomaly $\rightarrow$ mirror model $\rightarrow$ proto-node (LCD) $\rightarrow$ tests $\rightarrow$ run probe $\rightarrow$ event spine $\rightarrow$ measures $\rightarrow$ recompress $\rightarrow$ iterate.

FSC: controlled reduction (dimensionality$\downarrow$ latency$\uparrow$ abstraction stripped constraints tightened) exposes Σf, CS, PS, and Ω where $\Omega \in$ PS and $\Omega \notin$ CS.

C) Internet-as-Nervous-System Stack (operational)

Energy/thermal $\rightarrow$ Hardware $\rightarrow$ Links $\rightarrow$ Routing $\rightarrow$ Naming $\rightarrow$ Compute/Storage $\rightarrow$ Protocols/APIs $\rightarrow$ Platforms $\rightarrow$ Humans/Incentives $\rightarrow$ Metrics/Optimization $\rightarrow$ Feedback.

LLM/Agent layer sits between APIs and incentives as language-based control middleware.

D) Retrocausal-looking loops (no physics violation)

Immutable log + mutable projections; speculation+rollback; consensus reorg; smoothing; deterministic replay. Rule: raw log immutable, rewrites must carry provenance.

E) Output Contract (every run)

1) ASCII schematic
2) Mermaid + DOT
3) JSON chart objects
4) Diagnostics: failure modes + observability + safety guards
